DETAILED ACTION**Reasons for Allowance**

1. The following is an examiner's statement of reasons for allowance: No prior art uncovered anticipates or renders obvious applicant(s) claimed low noise voltage regulator circuit outputting the second voltage signal to the second node, wherein the switching circuit switches between a first state and a second state, when the switching circuit is at the first state, it is substantially equivalent to a voltage follower, the first voltage signal is coupled to become the second voltage signal without being filtered, when the switching circuit is at the second state, it is substantially equivalent to a RC low pass filter, the first voltage signal is filtered to become the second voltage signal; and a stabilizing circuit electrically coupled between the second node and a third node and including a negative feedback path, the stabilizing circuit receives the second voltage signal from the second node and provides the stable voltage signal to the third node.

Further, no prior art uncovered anticipates or renders obvious applicant(s) claimed low noise voltage regulator circuit having an input node and an output node, the stabilizing circuit includes a negative feedback path for providing the stable voltage signal at the output node; an intermediate module coupled between the first node and the input node, the intermediate module having a first state and the second state, wherein when the intermediate module is at the first state the first voltage signal is coupled to the input node without being filtered, and when the intermediate module is at the second state the first voltage signal is coupled to the input node after being filtered.

Any comments considered necessary by applicant must be submitted no later than the
